The Evnroll Story

Guerin Rife Designer

The putters are designed by Guerin Rife, inventor of putter face groove technology and founder of Rife putters.

*****Note that Mr. Rife has not been associated with Rife Putters since selling the company in 2010*****

Guerin has been creating putters for 25 years starting with the very first cavity mallet. Best known for creating the famous Two Bar putter, he has designed over 40 models that have been used to win over 100 tournaments worldwide on all professional tours.

Patented **SWEETFACE™** TECHNOLOGY

Every putter has a sweet spot. Only Evnroll has a sweet face.

Premise: On a 25 foot putt a ball hit ½" off center, outside the Sweet Spot (center of percussion), will travel 6" to 8" off line and 12" to 18" shorter. That miss hit is a missed putt.

How it works:

Zero Dispersion - A series of closely spaced variable width channels that are wider in the center and get gradually narrower toward the heel and toe. This creates a precisely calibrated inward v-shape from both the heel and toe that progressively redirects the ball down the target line.

Even Roll Distance - Because the channels get narrower away from the center, the spacing gets wider. This increase in contact surface means more energy transfer and replaces the energy lost when a ball is hit away from the sweet spot. So center and off-center hits travel the same distance.

The Design Story

100% Milled Made in USA

Every Evnroll putter is 100% CNC milled, hand finished and assembled in Carlsbad, CA.

Swing weight balanced

Evnroll putters feature swing weight balancing . Typically, putter manufacturers make a single head weight and cut the shaft to 33", 34" and 35". This causes the 33" putter to be 8 swing weights lighter and the 35" putter to be 8 swing weights heavier than the 34" model.

Evnroll mill two different head weights, 355 gram and 370 gram, and two different grip weights, light and heavy, in order to keep the swing weights consistent across our line.

At 35" we use a 355 gram head with a heavy grip, 34" utilizes a 370 gram head with a heavy grip, and the 33" model uses a 370 gram head with a light grip.

ER7

Two small dots

Each design has two small, unpainted dots on the top line of the putter 1/8" to either side of the center cavity sightline. This gives the golfer a subtle alignment reference for consistent lie angle positioning.

The dots also assist the golfer on aligning breaking putts. Align the ball in front of the toe-side dot for right-to-left putts and the heel-side dot for left-to-right putts. This keeps the ball travelling on the high side of the target line.

MIDLOCK™

Armlock made easy

Our Midlock putters will bring Armlock to every golfer in an uncomplicated, user-friendly way.

The putters are just 5" longer than the length required for a conventional setup. The 5" extra pistol section is the part that extends above the hands. So if you use a 34" putter then you would use a 39" Midlock putter.

No more special shaft and heavy head weight. The secret is in the patented grip design. The new Midlock Grip features the deepest pistol dimension allowed by the USGA. By positioning the grip sideways the deep pistol pushes the shaft angle away from the mid-forearm reducing the typical 9 degrees of loft to just 4 degrees, similar to a simple forward press. This comfortable setup allows for an effortless one-piece putting stroke with no moving parts.

Midlock is available in four classic Evnroll models. One blade (ER2), two mallets (ER5 and ER8) plus one high MOI design (ER11).

Armlock vs Midlock

ER2V ML

ER5V ML

ER11V ML

MIDLOCKTM

Six of Evnroll's most distinctive models will now feature a choice of four different hosel designs

ER1V | ER2V | ER5V | ER7V | ER8V | ER11V

- The V-Series lets every golfer have their preferred hosel on their preferred Evnroll head design.
 1. **Short Slant** hosel neck produces more toe hang promoting a more rotational swing-path that releases through the hitting area. This slant neck design has a pin that fits inside the shaft allowing it to flow seamlessly into the putter head, a preferred look by better players.
 2. **Short Plumber Neck** hosel reduces toe hang and therefore reduces the rotation of the swing path. This plumber neck features a classic over-fit collar-type hosel with a vertical full-shaft offset presentation.
 3. **Long Plumber Neck** hosel further reduces toe hang and allows for a more straight-back-straight-through swing path. This plumber neck features a classic over-fit collar-type hosel with a vertical full-shaft offset presentation.
 4. **Long Slant** hosel neck design has a two-shaft offset with an additional two degrees of loft to accommodate Evnroll's new Midlock putter line

ER2V Long Slant

ER2V MidBlade

A shorter, wider heel and toe weighted flange blade featuring a choice of four different hosels

ER11V

Flagship member of the new 2021 V-Series features the ultimate in versatility, forgiveness and performance with a clean, compact look.

- A choice of hosel options to customize toe hang to match your stroke arc
- Interchangeable rear weights to dial-in swing weight to match green speeds and weight preference
- Super-high MOI designed for forgiveness and performance in a compact, clean-looking mallet design.

The frontal body portion is black anodized 6061 aluminum and features a ball-sized gripping cavity directly behind the hitting area that positions the putters mass outward and rearward for improved MOI.

The 303 stainless steel weights are positioned to the extreme rearward outer edges to produce super-high MOI.

ER11V combines ultra-high MOI, V-Series hosel options and rearward adjustable weighting into a stunning high-performance mallet. This is by far the most customizable putter ever offered by Evnroll.

products**

Gravity Grip

The patented **Gravity Grip** is a major breakthrough in putter grip technology. The body of the grip is ultralight EVA foam that weighs only 35 grams.

By placing a 70 gram steel rod along the entire length of the grip ½ inch below the shaft, the hands can feel the precise angle of the face. The hands and the putter head are tied together creating a square zone before and after impact. **Feeling is believing.**

TourTac Grip

- New for 2021
- Replaces the non-taper 1.2 grip
- Popular shape, tacky feel

TourStroke Trainer

Stroke path putting trainer for all skill levels

See your putter's loft instantly.

Too Much Loft

The ball will launch off the putter face and skip before rolling.

Zero Loft

Turns into negative loft on uphill putts.

Perfect Loft

The ball will have a 3" launch and then assume an immediate roll.

The NEW RollBoard

The patented RollBoard from Evnroll is a velvet-covered board that measures 24" long by 4" wide. The velvet has a directional nap where the player simply brushes the nap towards the start position before hitting a putt. Once the putt is hit, the RollBoard will instantly reveal the roll characteristics of your golf ball as it comes off the face of the putter. No need for expensive high-speed cameras and viewing monitors. No time consuming setup and playback.

The RollBoard instantly and accurately displays how you roll the ball, the amount of launch, and the precise moment when speed and rotation match up to create true roll. The form factor of the RollBoard also makes it easily transportable and can be effectively used indoors and out as well as at home or on the road.
